## Immunizations for Children and Adults

Public Health promotes the immunization of all children and adults in an effort to prevent serious and sometimes deadly diseases.

Our family immunizations program provides **routine childhood and adolescent vaccines** as recommended by the Advisory Committee on Immunization Practices, and as required by California schools. We also offer **adult immunizations** upon request, including those that are recommended by your physician and those requested by your employer or school. We offer **Tuberculosis (TB) skin testing** for screening and work clearance for adults and children.

We offer the following vaccines for children ages 6 weeks through 18 years:

- Diphtheria, Tetanus, acellular Pertussis (DTaP)
- Haemophilus influenzae type b (Hib)
- Hepatitis A (HepA)
- Hepatitis B (HepB)
- Influenza - seasonal, based on availability
- Measles, Mumps, Rubella (MMR)
- Meningococcal (MCV4) - ages 11-18 years
- Tetanus, diphtheria, acellular pertussis (Tdap) - ages 11-18 years
- Varicella (chicken pox)
- Pneumococcal 7 valent - infant/child
- Pneumococcal 23 valent - ages 2 years to adult
- Polio

Combination vaccines are used where appropriate.

**Don't wait until the last minute!** Does your child need to have their **immunizations updated?** To prevent the spread of vaccine-preventable diseases, the California School Immunization Law requires that children receive a series of immunizations before entry into schools, child care centers and family child care homes.

A fee of \$10 per injection is requested. However, no child is refused because of inability to pay. Please bring any previous immunization records with you to your visit. Parent or guardian must read important information and sign required forms for each child receiving immunizations.

[Tuberculosis \(TB\)  
Control Program](#)

The TB Control Program provides confidential testing and treatment services for both latent TB infection and active TB disease.

Patients are seen on a walk-in basis only. We will take walk-ins until we reach maximum capacity.

We also offer the following adult vaccines for a one-time visit fee of \$33, plus the cost of the vaccine(s):

- Hepatitis A (HepA)
- Hepatitis B (HepB)
- Influenza - seasonal, based on availability
- Measles, Mumps, Rubella (MMR)
- Meningococcal (MCV4)
- Tetanus, diphtheria (Td)
- Tetanus, diphtheria, acellular pertussis (Tdap)
- Pneumococcal 23 valent
- Polio
- Varicella (chicken pox)

Patients are seen on a walk-in basis only. We will take walk-ins until we reach maximum capacity.
